

Children's Room Renovation- Ellettsville Public Library

- Monroe County Public Libraries / Ellettsville, IN
- OMS designed a Children's Room addition to the Ellettsville Branch of the Monroe County Public Library. The design created additional space for families to share the library experience together. The 1,900 s.f. addition includes additional shelving for collection growth, reading nooks, comfortable soft seating, and natural lighting. The interior design will include a timeless whimsical theme incorporating "kites," which will also be incorporated on the exterior through the roof slopes. Exterior materials include limestone and standing seam metal roof to match the existing building and blend the old and new architecture together seamlessly. The project uses "green" design principals throughout, including the use large energy efficient windows on the northwest and southeast elevations, and the use of a local artist for an intended stained glass display.
- Completed: May 2009
